

MAXI Horizontal Range

6,000L – 20,000L SEWAGE PUMPING STATION

The Maxi Horizontal Range of package pump stations are designed to collect foul or surface water from multiple properties, buildings or commercial offices and other industrial sized commercial applications. These systems can store large volumes of waste / water without the need for a deep traditional vertical chamber type system.

These systems are built to order, they can be manufactured to suit site specific requirements, such as taller turrets to pick up deeper incoming drains, and also precise measurements for the inlet depths can be pre-cut if the client requires.

Our Maxi Horizontal pump stations are delivered to site as a complete package, including all internal pipe work, 2 sewage pumps and twin control panel and float switches.

All our systems are available with any of our standard pumps, we also have the ability to fabricate them with any pump for high flow or high head applications.

For detailed instructions for wiring and installation, please review the installation manual.

Pump Chamber	Capacity Litres	Turret Height mm	Inlet Invert Depth mm	Diameter mm	Length mm	Inlet Diameter
H6000	6000	600	Variable	1900	2950	160
H8000	8000				3650	
H10000	10000				4550	
H12000	12000				5200	
H14000	14000				5840	
H16000	16000				6700	
H18000	18000				7500	
H20000	20000				8100
