

AquaTank and AquaTank Pro

Basement Dewatering Systems

Product Overview

The AquaTank and AquaTank Pro package pump station is designed to collect ground water via a perimeter channel, 110mm pipe or a clear opening to the top of the chamber.

The station can come with a single pump arrangement (AquaTank) or twin arrangement (AquaTank Pro).

Each station can be supplied with a battery back-up which would ensure the pump(s) would work in the event of a power outage.

The AquaTank and AquaTank Pro can collect grey water from showers and wash-hand basins however, they are not suitable for foul/sewage waste from toilets. If this is required, please see our Micro Series pump station range.

The AquaTank and AquaTank Pro are delivered to site as a complete package, including all internal pipework and the drainage pump. The system is designed to pump through 32mm pump main as the outlet terminates in a 1 1/4" male thread.

Specially designed to ensure an easy, problem-free installation and is manufactured in high grade MDPE.

We highly recommend that a high level alarm is fitted, this is available as an additional extra.

Typical Application

The AquaTank and AquaTank Pro are specifically designed for below ground application for the collection of surface water from a basement conversion. Any liquid collected can contain solids up to 10mm only.

- ▶ Residential
- ▶ Commercial
- ▶ Industrial
- ▶ Office and Professional Spaces

Additional Extra Components

The AquaTank and AquaTank Pro can also come with a range of extras and accessories which are recommended with each station, these are: -

- ▶ Pipework and fittings
- ▶ High level alarm
- ▶ Telemetry alerts
- ▶ Battery backup

Model shown is single configuration (AquaTank) Twin configuration (AquaTank Pro) is also available.

AquaTank Features at a Glance

Typical AquaTank Installation

1. AquaTank installed in concrete base

2. Wall membrane, drainage, and tape applied

3. Floor insulation applied and covered with membrane and tape.

4. Concrete base is poured, wall batons and dry wall applied.

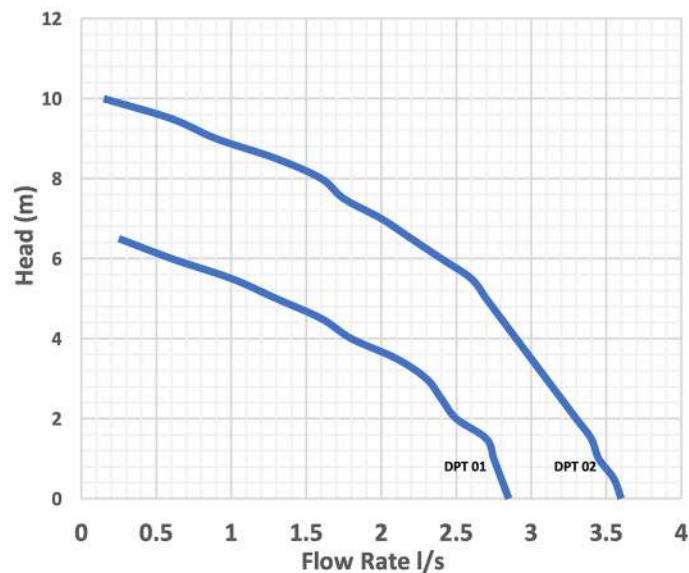

5. Final basement installation is completed.
