

# FlyVar Triple SE Features at a Glance

## FLYVAR TRIPLE SE INVERTER FEATURES

- ▶ Bluetooth technology to link both inverters
- ▶ Easy to read LED display panel
- ▶ Dry run protection
- ▶ WRAS approved pressure vessels

## Technical Overview

The FlyVar SE Triple is a variable speed constant pressure booster pump sets that have been designed to suit domestic and light commercial systems with hot and cold supply pipes. The unit is ideally suited for systems with un-vented cylinders and high resistance and flow bathroom fittings.

The pre-fitted pressure vessel ensures smooth running and reduces the run time of the pump for long life. We use a WRAS approved pump and high-quality fittings to ensure water quality in potable water applications.

We test and pre-commission each unit before shipment so that installation is as simple as possible. Allowing for a plug-and-play system.

Each pump operates within a 60-65dB noise rating at max speed, data recorded from 1m distance to a +/- 2.5dB.

**Operating Parameters:** 0 - 50°C Max Temperature, Max Pressure: 8.5 Bar Max Flow 750l/min
