

Ultra Slim Wall Tank 235 Litres

A no compromise ultra slim rainwater storage tank only 20cm wide, hidden wall bracket for secure mounting and two pre-installed drain outlet fittings. Downpipe rainwater collector or filter diverter, tap fitting, and rainwater harvesting accessories available as optional extras. Drain outlets compatible with optional popular hose and tap fittings that can be attached as required.

This Ultra Slim Wall Tank is the narrowest high-capacity tank available for rainwater harvesting. Its unique design makes it very space efficient and visually discreet. Multiple tanks can be nested together using a hidden connector hose to provide the storage capacity required. It is easy to install and exceptionally durable. Tanks must stand on a firm foundation or alternatively a load bearing brick or wooden plinth to allow easier access to a tap or hose connection.

The Ultra Slim Wall Tank offers the following benefits compared with a conventional water butt.

- **Ultra slim tank**, each 180 x 80 x 20cm including hidden steel wall mounting bracket, nominal capacity 235 litres.
- **Pre-installed brass outlet fitting**, with female $\frac{3}{4}$ " BSP thread for connecting a tap or hose connector of your choice.

- **Modular design**, for single or multiple tank installation. Tank Connector Hose available on request.
- **SUDS solution**, suitable for separating rain from foul water to provide retention and use at source.
- **Visually discreet**, slim profile making it ideal for installation along side walls and in narrow passages. Standard colour marble green granite and other colours available by special order. Simple to screen or otherwise disguise if preferred.
- **Easy to install**, using DIY tools.
- **Range of accessories**, rainwater collector or filter diverter including tank connection fittings, tap fitting and cover for top access hole (if installed).
- **Child proof design**, fully enclosed, no open cover.

The Ultra Slim Wall Tank is a proprietary design manufactured in the UK to the highest standards using advanced technology and incorporates:

- An opaque 5mm thick medium density polyethylene tank shell.
- A stabilizer for high levels of UV protection and durability.
- A hidden steel fixing bracket for permanent and secure installation.

The Ultra Slim Wall Tank can be integrated into a regulatory compliant rainwater harvesting system for toilet flushing by adding our proprietary pump package and mains water top up devise.

About Halsted Rain

Halsted Rain is a supplier of urban rainwater harvesting and water management systems. We offer a range of modular tanks, filters, pumps, mains top up kits and treatment units designed for installation above and below ground. Our products are ideally suited for residential and light commercial property particularly as a retrofit solution.
