

Water Management Solutions

Underground GRP Water Storage Tank

The Klargester Underground GRP Water Storage Tank offers a long-life solution for a wide range of below-ground liquid storage needs. Engineered for durability and corrosion resistance, these tanks are ideal for storing water for a range of applications.

This new product includes seven tank models with varying capacities, allowing for flexibility across residential, commercial and industrial applications.

All models are manufactured using high quality GRP materials to ensure structural integrity and minimal maintenance.

*For non potable water storage only
