

PVC Groundsheets

Coated fabric PVC Groundsheets for use as abrasion protection between any rough, uneven ground and the water tank.

Hardwearing and durable our PVC groundsheets are made from 0.25mm supported PVC, these groundsheets can be fitted with eyelets and are available in a range of sizes to suit the water tank layflat size.

Offers an impervious surface

- Hardwearing and long lasting
- Easy to clean
- Eyelets can be fitted as optional extra.

Geotextile Membranes

Geotextile Groundsheets are an economic general purpose solution when the cleaned ground, where the water tank will be installed, has some moderate roughness.

Geotextile Groundsheets are pervious and can be used for separation purposes, are primarily used to prevent the water tank sinking into the underlying ground and to offer some moderate protection against abrasion.

A number Geotextile Groundsheets can be used for re-enforcement, are sometimes used when constructing ground to lay the tank on, where a layer of fill material is laid followed by a layer of Groundsheet. This process is repeated until the ground is stabilised to allow the tank to be installed. Materials thickness approx 0.25mm.
