**300 Litre (70 Gallon) AT2 Rectangular drinking trough.**

This rectangular drinking trough is a centre fill trough. Ribbed sidewall to maintain shape. Integral Service box and removable lid. Part 2 compliant 1/2" ballcock. Especially suitable for dairy cows and beef cattle. UV stabilised and frost resistant to -40 degrees C

Plastic troughs combat the problems associated with products constructed from traditional materials such as concrete and steel. Unlike concrete, the flexibility of polyethylene allows for expansion of ice thus avoiding cracked water troughs in frosty conditions. Plastic will not rust as with steel products. The advantage of troughs being lightweight can prove invaluable if troughs need to be moved from pasture to pasture. Suitable for use in pasture or the stable they are extremely reliable, easy to install and maintain and can be simply loaded into/onto a vehicle for transport.

AT 2 DIMENSIONS THESE WILL BE SUBJECT TO +/- 1% TOLERANCES FOR POLYETHYLENE
